AI engineer and full-stack developer building practical LLM products that save time and money.

SKILLS

AI: RAG, LLM applications, AI agents, Pydantic AI, OpenRouter, Vector search, Prompt engineering

Languages: Python, TypeScript, JavaScript, SQL, HTML, CSS, LaTeX

Frontend: React, Tailwind, Vite, React Native, Expo, Brand-compliant UI development

Backend: FastAPI, REST APIs, SQLite, Supabase, Stripe, Plaid, boto3

Cloud: AWS S3, AWS Glue, Athena, Snowflake, Google Cloud Run, Vercel

Tools: GitHub Copilot, Claude Code, Cursor, Codex, OpenCode, Adobe Premiere Pro

EXPERIENCE

Huntington National Bank

May 2025 - Present

AI Engineer / Full-Stack Developer

Columbus, OH

- Lead development of a reusable enterprise RAG agent framework supporting 5 internal AI projects, powering tools for tens of thousands of colleagues, and estimated to save \$300K+ per year.
- Own full-stack delivery for internal AI chatbots by building Python AI backends and brand-compliant React frontends that business partners can actually use.
- Serve as lead developer for customer-facing AI prototypes, including personalized financial insights, mobile and web chatbot concepts, and agentic financial assistant experiences connected to real banking data.
- Designed a patent-pending structured prompt pre-generation architecture using SQL, Snowflake, Athena, S3, Glue, and Google Cloud Run to support AI workflows at banking scale.
- Partner with DevOps engineers, architects, data scientists, executives, and business teams to turn vague AI requests into secure, scalable proof of concepts in a highly regulated environment.
- Built the first React frontends on the data science team, creating a path for other data scientists to make their models and AI tools more usable for business stakeholders.
- Teach responsible AI development and coding tool workflows to developers, business partners, and large internal audiences, translating technical tradeoffs clearly for both engineers and non-engineers.
- Own the data science AI agent skills repository, capturing team knowledge so AI agents can help other data scientists solve repeatable problems faster.

Independent AI Product Development

Jul 2024 - Present

Full-Stack AI Developer

Remote

- Built Memvia, a full-stack AI job application assistant with a FastAPI and Pydantic AI backend, OpenRouter models and embeddings, SQLite memory storage, and a React TypeScript frontend.
- Created Physics Grad Match, a commercial AI web app that matches prospective physics graduate students to professors using scraped research data, keyword extraction, vector similarity search, Supabase, Stripe, React, and Python.
- Built Nero, a mobile voice assistant in React Native and Expo that uses AI tool calling to track workouts, nutrition, and spending through Plaid, AssemblyAI, and ElevenLabs integrations.
- Developed an AI voice ordering agent with Deepgram and Twilio that takes a phone call, places a pizza order, and displays the order in a dashboard.
- Shipped RepQuest, a React and Python workout tracking app deployed on Vercel and used from a phone during daily gym sessions for months.
- Use modern AI coding tools carefully across prototypes and production-style builds, moving quickly while still reviewing architecture, code quality, and product behavior by hand.

The Ohio State University

Summer 2023 - Summer 2024

Computational Astrophysics Research Assistant

Columbus, OH

- Improved research code runtime by 100x by identifying computational bottlenecks and optimizing Bayesian analysis workflows for Milky Way satellite galaxy data.
- Advanced warm dark matter particle mass constraints to greater than $4 \text{ keV}/c^2$ by comparing statistical model predictions against real observational data.
- Communicated research methods through a publication-ready summary and presented findings at the OSU Physics

Summer Research Program poster session.

EDUCATION

Georgia Institute of Technology

M.S. in Computer Science, AI Track

Jan 2026 - Summer 2027

Online

- 4.0 GPA while working full time; coursework includes Human-Computer Interaction, Quantum Computing, and Knowledge-Based AI.

The Ohio State University

B.S. in Physics and Astronomy & Astrophysics; Minor in Spanish

Aug 2021 - May 2025

Columbus, OH

- Graduated summa cum laude with 3.983 GPA, Dean's List all 8 semesters, and Physics Senior Award.
